

A LDI Training Course

INTRODUCTION TO THE OIL & GAS OPERATIONS

A 2-day course on the A to Z of petroleum exploration,
drilling and production

Introduction

This 2-day course is designed for non-technical personnel who work in the oil and gas industry. The main objective of the course is to give them understanding on how petroleum is explored, drilled and produced. By attending this course, the participants will know and appreciate the company activities, policies and priorities.

5 Crucial Benefits of Attending

- Understand how the oil and gas are explored, drilled and produced
- Gain insight on the structure and needs of oil and gas companies
- Perform your job better and contribute more to your company
- Anticipate and respond faster to the needs of the O & G industry
- Communicate and presenting your ideas more easily to the various departments in the O & G companies

Course Content

ROCKS AND GEOLOGY

- Nature of the earth's crust
- Sedimentation process
- Types of rocks and their characteristics
- The origin of oil and gas
- Types of petroleum deposits
- Permeability and porosity

EXPLORATION METHODS

- Geological survey
- Seismic survey
- Gravity survey
- Magnetic survey

DRILLING OPERATIONS

- Exploration vs. development drilling
- Drilling rigs and equipment
- Casing and cementing
- Drill pipes and drill collars
- Bottom hole assembly and bits
- Blowout prevention system
- Drilling problems and solutions
- Mud logging operation
- Electric logging methods
- Directional and horizontal wells
- Drilling fluids: types and uses
- Floating drilling
- Drill stem testing (DST)
- Coring and core analysis
- PVT analysis

WELL COMPLETION AND PRODUCTION

- Well completion equipment and types
- Acidizing and fracturing
- Sand control methods
- Tubing and packers
- Flow control equipment
- Wireline operations
- Artificial lifts: Gas lifts and ESP
- Gas oil ratios and water production
- Production problems and solutions
- Christmas trees and well heads

WORKOVER OPERATIONS AND PROCEDURES

- The reason for workover
- Types of workover
- Equipment used in workover
- Workovers techniques and procedures
- Snubbing and hydraulics workover
- Coiled tubing units and operations

OIL AND GAS HANDLING FACILITIES

- Oil and gas processing
- Types and uses of separators
- Emulsion treatment
- Gas dehydration
- Storage tanks
- Pipeline pigging operations
- Corrosion control systems

OIL & GAS RESERVOIRS

- Types of reservoirs
- Estimating petroleum reserve
- Reservoir drive mechanisms
- Production forecasting
- Well testing

- Enhanced oil recovery
- Waterflood and steamflood

Most Suitable For

- Lawyers
- Contracts Personnel
- Secretaries and administration assistants
- Accountants and finance staff
- HR staff
- Purchasing agents
- Logistics and warehouse personnel
- Bankers
- Anyone new to the O&G industry

Comment from Previous Participants

- This course is very important to employees who work for oil companies
- It really improved my knowledge about oil and gas operations
- Competent instructor - clear explanation
- It gives me new motivation to develop my career within the company

Your Course Leader

Jamin Djuang has worked in the O&G industry for over 30 years. He worked for Unocal Indonesia as Senior Production Engineer and Offshore Production Supervisor and for Baker Hughes Incorporated as Senior Reservoir Engineer in Houston, Texas.

He has a M.S. degree in Petroleum Engineering and MBA from The University of Texas at Austin. As a training professional in the last 20 years, he has conducted training to professionals in the U.S., Thailand, Singapore and Indonesia.
